SKILLS

DESIGN

Product Design · UX/UI · Design Systems · Figma · UX Writing

SHIPS WITH

Next.js · React · TypeScript · Supabase · PostgreSQL + RLS · Vercel · Git / PR workflow

PRACTICE

AI-native development (Claude Code) · Plan-before-code · Migrations and staged releases

EDUCATION

NSCAD University

Bachelor of Design,
Interdisciplinary Design
2011 – 2015

SUMMARY

I'm a product designer who builds and ships what I design. First designer at Threshold, there before the first line of code: I set the design language, designed the UX, and built the product in Next.js and TypeScript, with the Postgres data model and row-level security underneath it. **300+ merged pull requests in production.** Ten years of product and brand design before that. Building my own designs changed how I make them: when you implement your own decisions, you stop making decorative ones.

EXPERIENCE

Lead Product Designer · Threshold

Remote · Dec 2024 – Present

First designer at an AI implementation startup. Ran product, brand, and marketing design and carried my own work through to production.

- Designed and built the product end to end: UX, design system, and role-based admin / team / client experiences, in Next.js, React, and TypeScript.
- Designed the data model, permissions, and Postgres row-level security alongside the engineering lead.
- Built and launched the brand, marketing site, and conversion flows, including an interactive lead-qualification assessment, pricing architecture, and consultation booking, through three go-to-market repositionings.
- Shipped through a real engineering flow with AI tooling: planned changes, small reviewable PRs, code review, migrations, staged releases, 1,000+ passing tests.

Head of Process · Carrot Inc.

Remote · Jan 2020 – May 2024

E-commerce conversion and retention platform for modern dispensaries. The systems-level view of how product actually gets built is what pushed me to start building it myself.

- Integrated teams and managed interdependencies across departments, treating process as core infrastructure for an all-in-one e-commerce SaaS product.

Head of Design · Totem

Remote · Apr 2018 – Jan 2020

Blockchain strategy and design studio serving early-stage projects and token offerings.

- Owned all design across the studio: product design in Figma, brand identities, and marketing sites, across multiple concurrent client engagements.
- Took client products from concept to buildable design: flows, interfaces, and developer handoff, partnering directly with founders and engineers.

Interdisciplinary Designer · Self-employed

2011 – Present

- Brand, print, digital, and spatial design for clients including AVEDA, Microsoft, Plenty of Fish, Four Loko, Highline Beta, and Oberland Agriscience. An ongoing freelance practice, carried alongside and between contract roles.

Graphic Designer · Pivot Creative Communications

Halifax, NS · 2014 – 2015

- Brand strategy, logo design, and website mocks for a small firm, working autonomously under the creative director.
